Preface ix

1 Introduction 1

2 The Standard Model 2

3 The LHC and the ATLAS detector 3

3.1 The LHC . . . 3

3.2 The ATLAS detector . . . 3

3.2.1 Tracking . . . 3

3.2.2 Calorimetry . . . 3

3.2.3 Muon spectrometry . . . 3

3.3 Particle identification . . . 3

3.3.1 Muons . . . 3

3.3.2 Electrons and photons . . . 3

3.3.3 Hadrons . . . 3

3.3.4 Neutrinos . . . 3

3.4 Triggering . . . 3

3.4.1 L1 . . . 3

3.4.2 HLT . . . 3

4 Tau leptons **11**
4.1 Tau leptons . . . 11
4.2 Leptonic tau decays, τ_ℓ . . . 11
4.3 Hadronic tau decays, τ_{had} . . . 13
4.3.1 Reconstruction . . . 13
4.3.1.1 Calorimeter seeding . . . 13
4.3.1.2 Track and vertex association . . . 13
4.3.1.3 Calibration . . . 14
4.4 Identification . . . 15
4.5 Leptons mis-identified as τ_{had} . . . 20
4.5.1 Electrons . . . 20
4.5.2 Muons . . . 20

5 $H \to \tau_\ell \tau_{\text{had}}$ strategy **23**
5.1 Introduction . . . 23
5.1.1 ATLAS Higgs program . . . 23
5.1.2 $H \to \tau\tau$ . . . 23
5.2 Physics objects . . . 23
5.2.1 Electrons, muons, and τ_{had} . . . 23
5.2.2 Jets and $E_{\text{T}}^{\text{miss}}$ . . . 23
5.3 Categorization . . . 23
5.3.1 Pre-selection . . . 23
5.3.2 VBF category . . . 29
5.3.3 Boosted category . . . 29
5.4 $\tau\tau$ mass reconstruction . . . 30
5.4.1 $\tau\tau$ systems . . . 30
5.4.2 $m_{\tau\tau}^{\text{MMC}}$ algorithm . . . 30
5.4.3 Performance . . . 30
5.5 MVA discrimination . . . 30
5.5.1 Inputs . . . 30
5.5.2 Correlations . . . 32
5.5.3 MVAs in other VBF analyses . . . 40

6 Signal and background predictions **42**

6.1 $Z \to \tau\tau$ . . . 42
6.1.1 Mis-modeling of $Z(\to \ell\ell)$+jets in simulation . . . 42
6.1.2 Embedding . . . 42
6.1.3 Validation . . . 42
6.1.4 Uncertainties . . . 45
6.2 $j \to \tau_{\text{had}}$ mis-identification . . . 46
6.2.1 Mis-modeling of $j \to \tau_{\text{had}}$ in simulation . . . 46
6.2.2 Fake factor method . . . 46
6.2.3 Composition of $j \to \tau_{\text{had}}$ in the SR . . . 50
6.2.4 Validation . . . 55
6.2.5 Uncertainties . . . 60
6.3 top, $Z \to \ell\ell$, diboson . . . 61
6.4 $H \to \tau\tau$ . . . 61
6.4.1 Generators . . . 61
6.4.2 Uncertainties . . . 61

7 Results **63**
7.1 Predictions in the signal region . . . 63
7.2 $H \to \tau_{\text{had}}\tau_{\text{had}}$ and $H \to \tau_\ell\tau_\ell$ . . . 63
7.3 Fit results . . . 63

8 Prospects for $H \to \tau\tau$ **69**
8.1 Run-II . . . 69
8.1.1 Run-I triggers for $H \to \tau\tau$ . . . 70
8.1.2 Run-II triggers . . . 72
8.1.2.1 Object thresholds . . . 72
8.1.2.2 Topological requirements . . . 73
8.1.2.3 Gains with ℓ+τ_{had} triggers . . . 76
8.1.3 Updates to the L1 τ_{had} object . . . 79
8.1.3.1 Size . . . 79
8.1.3.2 Isolation . . . 81
8.1.4 Conclusions and contingencies . . . 81
8.2 HL-LHC . . . 84
8.2.1 Selection . . . 84

146 8.2.2 Emulation of High-Luminosity LHC conditions . . . 86
147 8.2.2.1 Performance assumptions . . . 86
148 8.2.2.2 Pileup emulation . . . 86
149 8.2.2.3 Impact on observables . . . 87
150 8.2.3 Analysis . . . 87
151 8.2.3.1 Boosted decision tree training . . . 87
152 8.2.3.2 Kinematic distributions . . . 89
153 8.2.4 Results . . . 89
154 8.2.4.1 Uncertainties assumptions . . . 89
155 8.2.5 Conclusions . . . 93

156 **A Control regions for fakes** **95**
157 A.1 $W \to \ell\nu_\ell$ CR . . . 95
158 A.2 QCD CR . . . 98
159 A.3 $Z \to \ell\ell$ CR . . . 100
160 A.4 top CR . . . 102

161 **B Inputs to the τ_{had} BDT identifier** **104**

162 **C Performance of $m_{\tau\tau}$ algorithms** **107**

163 **Bibliography** **110**
